TOTAL SERIES
WATER FILTRATION SYSTEM

TOTAL SERIES

The Total Series Water Filtration System is custom designed and built to your water sample. It's multi-bed filtration process is designed to filter out chlorine, sediment, hardness, taste, and odor of the water in just a single pass through the system. The Total Series provides better than bottled water at every faucet!

The Total Series is manufactured with a corrosion-proof poly lined fiberglass media tank that has a thick wall construction which won't rust or deteriorate, and since the system simply back-washes clean to re-energize itself, This durable system will produce long-lasting benefits that will change the way you use your water. the system removes all those unwanted contaminates from your water.

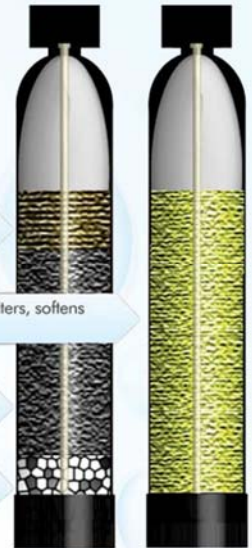

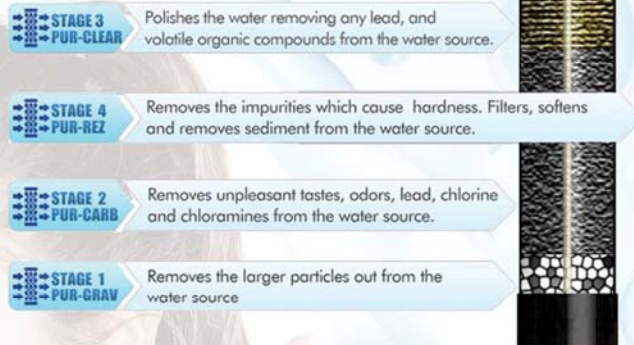

PUR-GRAV - is a medium based gravel used to filter out sediment and larger particles from your water supply, as well as provide support for the riser tube in the center of both mineral tanks.

PUR-CARB - a triple blend carbon media designed to remove chlorine, taste, and odor from your water supply by absorbing it with its extremely porous surface area. This process results in a cleaner, more refreshing tasting water.

PUR-CLEAR - a cleansing media with anti-bacterial properties, removes volatile organic compounds, lead, and is a final polish to the water. The black fiberglass media tank blocks the sun and helps the PUR-CLEAR keep the system from growing algae inside the unit.

PUR-REZ - a 10% cross link ion-exchange filtration media, removes any hard water causing sediments in your water supply. As water containing various sediments and dissolved solids passes through the system, our positively charged PUR-REZ filtration media attracts any negatively charged hard water ions and exchanges them with positively charged soft water ions. Providing soft water through out the home.

How Does the Total Series Filtration Work?

For 1 to 3 Bathrooms

Model CMWT-10

- Max Hardness 100 GPG
- Max Chlorine 4 PPM
- Inlet/Outlet 3/4" or 1"
- Mineral Tank (2) 10"x54"
- Brine Tank 14"x14"x36"
- Flow rate up to 10GPM
- Layout 15"Dx39"Wx61"H
- Weight 185lbs

For 4 to 6 Bathrooms

Model CMWT-13

- Max Hardness 100 GPG
- Max Chlorine 4 PPM
- Inlet/Outlet 3/4" or 1"
- Mineral Tank (2) 13"x54"
- Brine Tank 14"x14"x36"
- Flow rate up to 20GPM
- Layout 15"Dx43"Wx61"H
- Weight 205lbs
